**COOLMAX® fabric active**  
COOLMAX® fabric active provides enhanced comfort for active people. High wicking performance helps move moisture to outer layers keeping the skin dry and cool. The fibre is breathable and lasts longer than traditional materials.

**LYCRA®**  
Lykra® allows the fabric both to stretch significantly and to retain its shape. Fabrics and garments made with Lykra offer exceptional fit, comfort, freedom of movement and wrinkle recovery.

**COOLMAX®**  
COOLMAX®-textiles evacuate humidity very fast to the outside layers of the garment thus supporting a natural temperature regulation of the body.

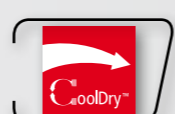

**LYCRA® Sport**  
Lykra® Sport fabrics are specifically engineered for sporting activities which require a combination of light weight, breathability, muscle support and freedom of movement.

**Thermocool®**  
The Thermocool® fibre combines the advantages of a multichannel fibre with those of hollow fibre. During activity phases or in hot weather conditions multichannel fibres allow an excellent moisture evacuation to the outside. The enlarged surface guarantees a better evaporation on the fabric surface. In relaxing phases hollow fibres show a thermo-regulating function and protect the body against cooling and major temperature sways. Therefore ADVANSA Thermocool® offers a brilliant connection of moisture-adjusting and thermo-regulating properties for a multi-functional use during the whole year.

**coldblack®**  
Textiles with a coldblack®-finish afford optimum protection against heating up through sun rays. They stay cooler and protect reliably against UV rays (min UPF 30). The effect of this is that the person wearing these garments does not sweat so easily, feels better and is even more efficient. coldblack® is a registered trademark of Schoeller Technologies AG, Switzerland (patent pending).

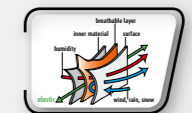

**CoolDry®**  
Due to the CoolDry® finish moisture is transported to the outside and creates a comfortable feeling. The textiles dry quickly, are breathable and ideal for all activities.

**upgrade®-silver**  
Silver finish is an anti-microbial finishing technique based on silver salts. These reduce on the garment the spread of bacteria which may cause body odour, bacterial infections and allergies. upgrade®-silver creates a fresh feeling and protection in everyday life, for sport or travel. The finish is wash-resistant and therefore has a long-lasting effect.

**TOPCOOL®**  
TOPCOOL® polyester fibres perfectly absorb moisture due to their special surface and evacuate it quickly to the outside where it can evaporate. The skin keeps comfortably dry and a constant temperature level of the body is maintained.

**Softshell**  
Softshell with TPU membrane consists of three layers. Due to the microporous TPU membrane as middle layer the material is water-proof, wind-proof and breathable at the same time.

**Water column**  
The ability to withstand water pressure without moisture penetrating into the material is given by the water column (mm). The minimum standard is a water column of 1,500 mm.

**Breathability/Permeability to vapour**  
Functional textiles must have the ability to transport moisture from the skin to the fabric surface as fast as possible. Permeability shows how much steam in grams can evaporate on a surface of 1 m² within 24 hours. The higher this figure, the more breathable the textile is.

**Taped seams**  
To avoid moisture penetrating into the fabric, seams and stitches can get taped. Taped seams are 100 % water-proof.
