Sportwool Project Collection

”

Sportwool is based on the principle of combining the best in modern man-made fibre technology with the proven attributes of ultrafine merino wool - developed over millions of years.

Sportwool Project Collection

- Customisation made easy

Alongside our standard Sportwool collection, which includes both polo shirts and underwear, we also have a Sportwool project collection.

From this project collection, you can order customized solutions from 100 pcs. per model/colour.

Designs have been created so that details such as piping, stitching, accessories etc. can be

adapted to e.g. a customer's logo colours. At the planning stage, we of course offer our help and expertise.

If you want a special colour in the base material, or a different Sportwool material, the minimum quantity and price will depend on the model or models in question.

Sportwool maximises wearer comfort

- Vapour management technology

Sportwool is a functional material that maximises wearer comfort with 100% extra fine merino wool against the skin and polyester on the outside. This combination provides a micro-climate environment, which draws vapour away from the skin, expelling it out into the atmosphere, leaving you drier and more comfortable.

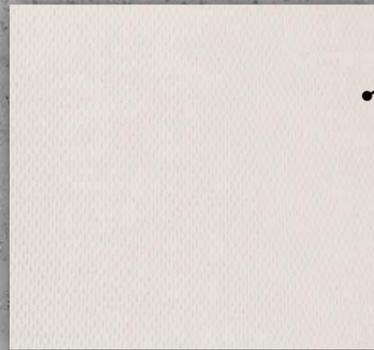

It is available in different types of knitwear depending on the purpose of the clothing. Please see specifications for our standard qualities on page 5 or ask for other alternatives.

All of the Sportwool fabrics have one thing in common; the many benefits that the Sportwool vapour management technology brings:

- A dryer and cooler microclimate between skin and clothing
- Absorbs and transfers moisture without touching the skin
- Fast drying time
- Natural odour resistance
- UV protection

Alternatives for polos and tops

Material no. 3339
Lightweight Double Jersey (Pique) // 165 gsm.
22% wool / 78% polyester

Material no. 371
Double Jersey Swiss Pique // 175 gsm.
46% wool / 54% polyester

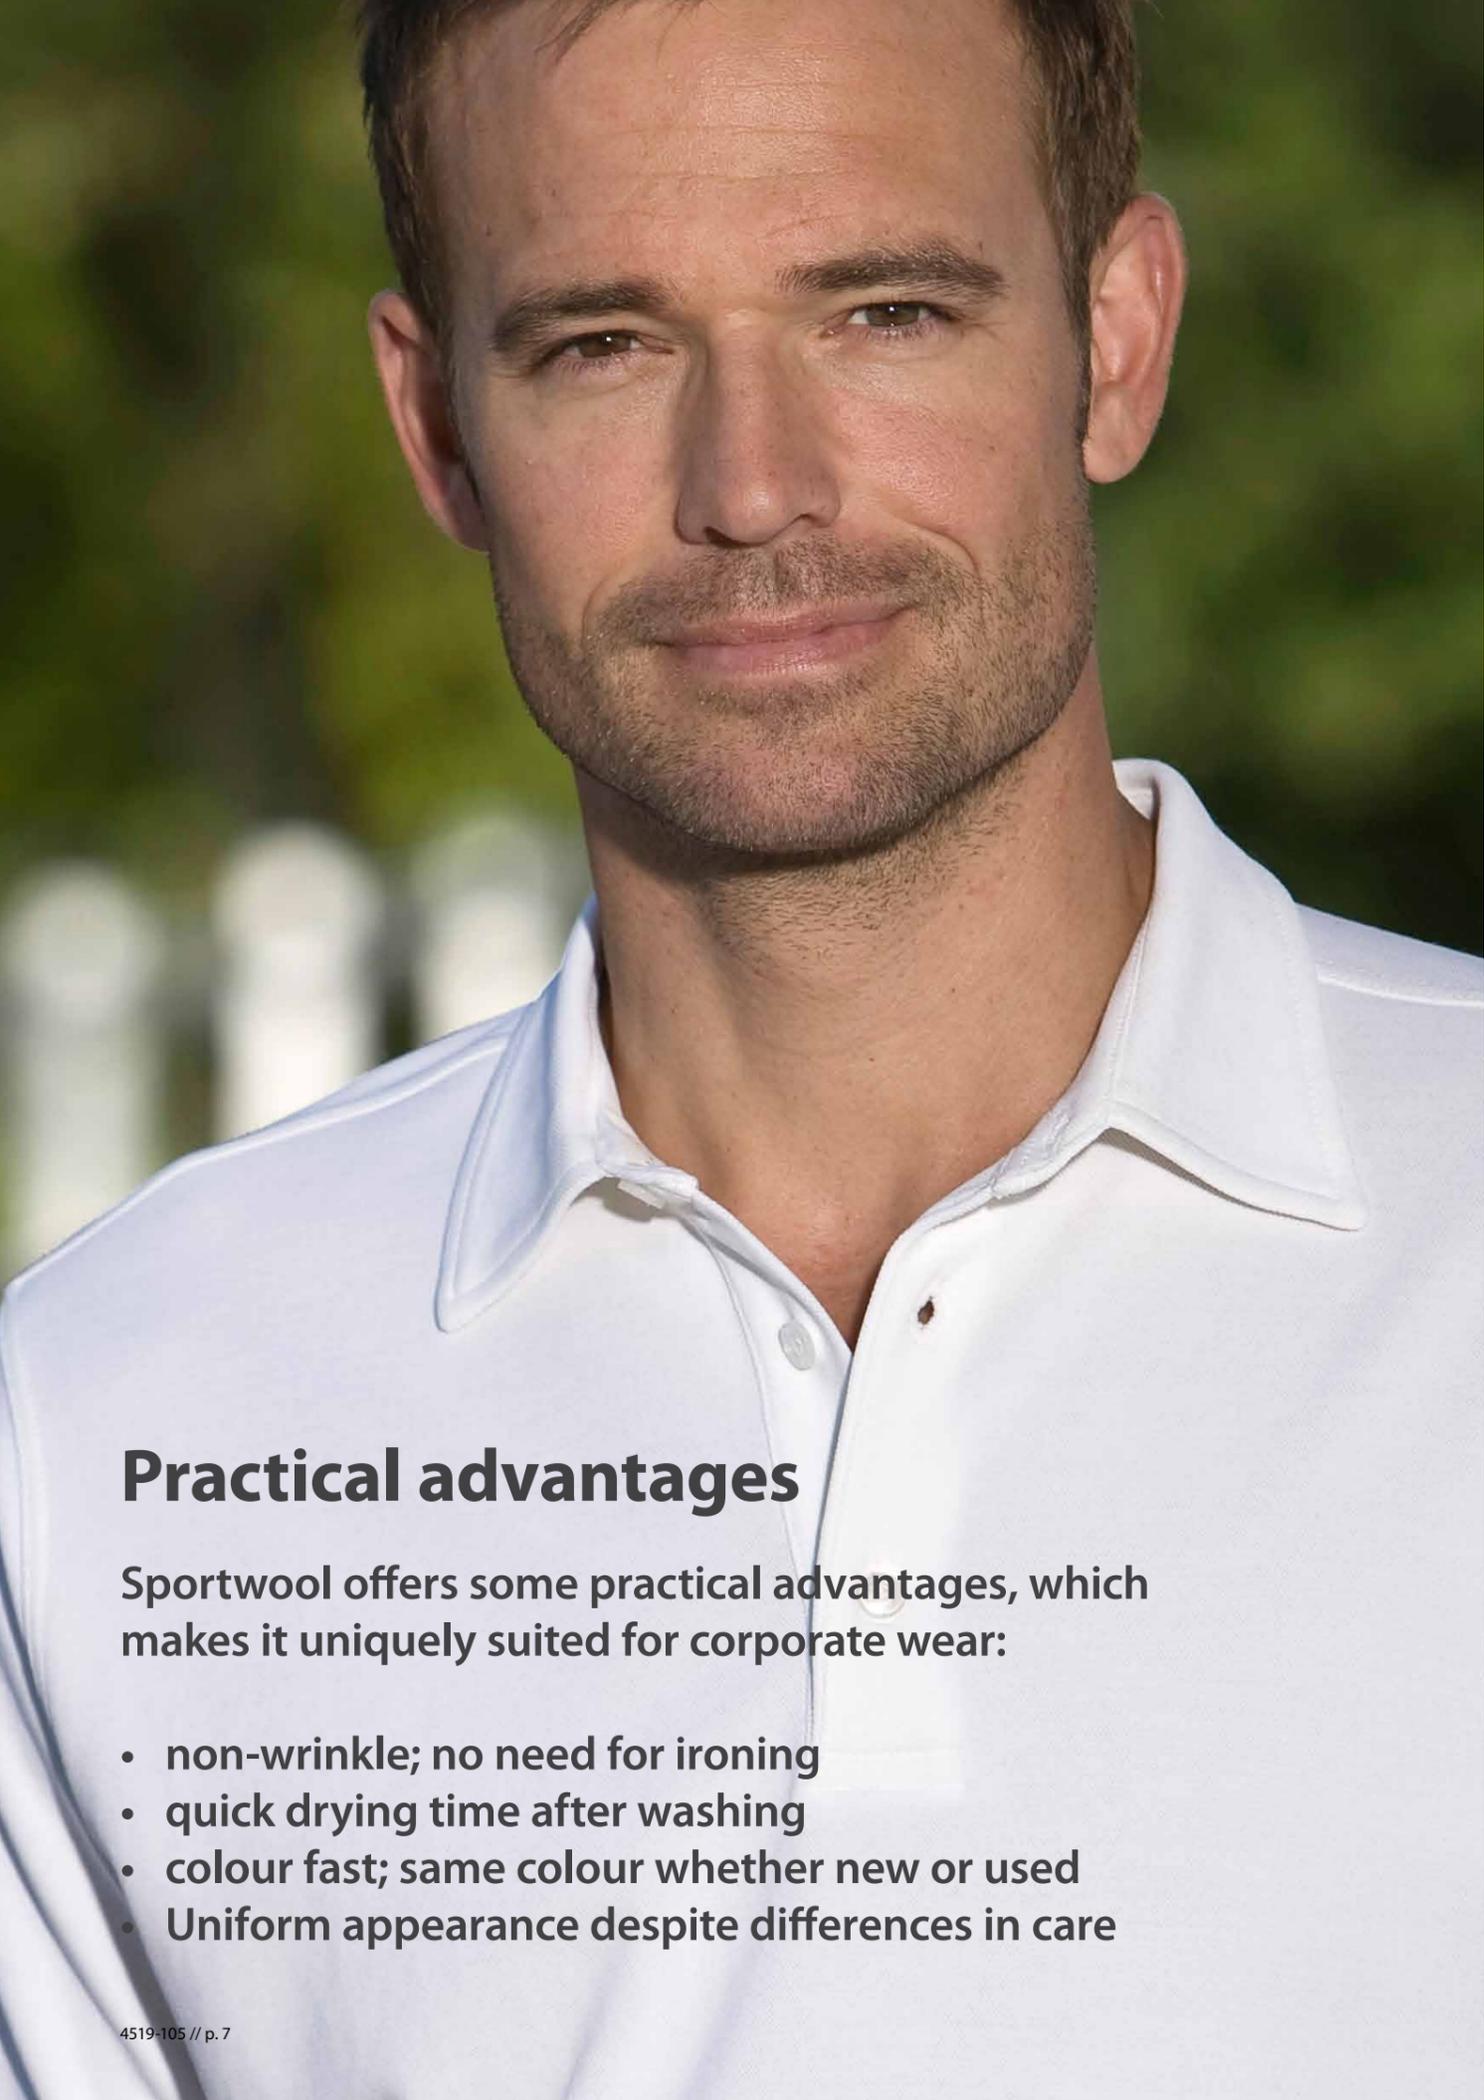

Prices and quantities

Standard material in standard colour:

For prices please refer to our pricelist.
Minimum 100 pcs. per model/colour.

Alternative material and/or special colour:

Please ask for price and minimum quantity.

Practical advantages

Sportwool offers some practical advantages, which makes it uniquely suited for corporate wear:

- non-wrinkle; no need for ironing
- quick drying time after washing
- colour fast; same colour whether new or used
- Uniform appearance despite differences in care

The science of vapour management - for work and leisure

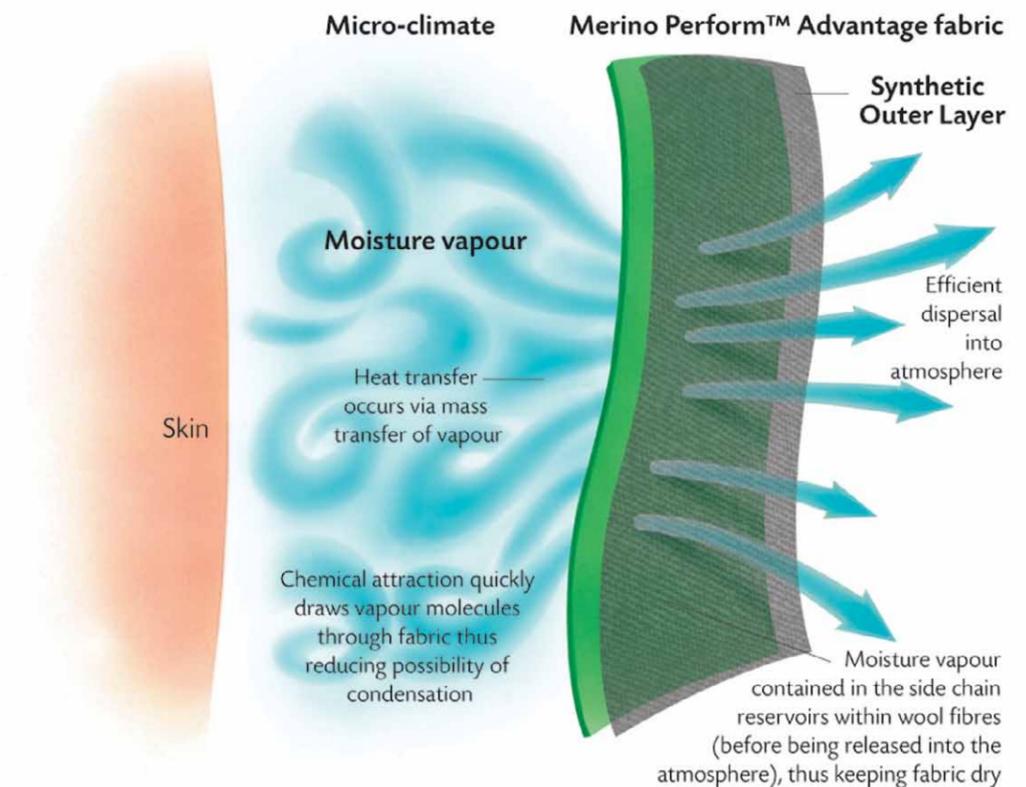

Perspiration is first secreted through the skin in form of vapour. If this vapour cannot get out to the surroundings it will condense and become drops of perspiration between the skin and the first layer of clothes. This gives an uncomfortable and damp sensation.

For maximum efficiency functional underwear must be able to handle both moisture vapour and drops of perspiration. The molecular texture of Sportwool handles both.

Sportwool is a functional material providing extreme comfort, with a natural material against the skin.

Advantages:

- Dryer and cooler microclimate between skin and clothing
- Absorbs and transfers moisture without touching the skin
- Performance adapts to heat and cold
- Fast drying time
- Natural odour resistance
- UV protection

We believe that from the moment you first wear Sportwool you will notice the difference this fabric makes to your physical comfort during work or exercise.

Women's tops

These tops and T-shirts for women have been developed in the same material as our poloshirts. Due to the natural thermal regulation of Sportwool, the material maximises wearer comfort even in an environment with changing temperatures.

Fleece mid layer styles

These Fleece styles can be used as mid layer styles with our base layer styles underneath - or as a heavy base layer.

Fleece is a soft, lightweight, warm and comfortable fabric. These qualities make it useful for clothing intended to be used during strenuous physical activity or where unhindered movement is required.

It offers all of the advantages of the Sportwool vapour management system, and it is machine washable and dries quickly.

Expert in customised solutions

- in close collaboration with our clients

Clipper Corporate Wear helps you with special projects within Sportwool and all other types of knitwear - be it minor changes to an existing model, special colours or entirely new designs.

These projects are carried out in close collaboration with the client, so we can offer our expertise as early as possible.

From the project collection, which is presented in this catalogue, you can order

customised solutions from 100 pcs. per model/colour.

Designs have been created, so that details such as piping, stitching, accessories etc. can be adapted to e.g. a customer's logo colours.

If you want a special colour in the base material, or a different Sportwool material, the minimum quantity and price will depend on the model or models in question.

In-house embroidery service

We have an in-house embroidery service, both in Denmark and at our production facility in Latvia, so we can offer you quick support for both large and small projects.

Special productions with print

Clipper Corporate Wear offers prints on special productions (from 100 pcs.). The max print size is 60x52cm and it is possible to add special print effects. We are happy to help with the development of design.

Transfer on standard items

On standard items we can offer transfer prints. Please contact us for further information.

Super weave woven transfers

You can also add a badge to standard or customised items. We use super weave woven transfers, which offers you more detail than an embroidery.

” We handle special productions in all qualities, e.g. wool, cotton and even technical yarns, such as anti-flame, teflon treated materials etc.
