The RFX™ range

RFX™, RFXTEX™ and RFX+CARE™ are reflective safety and first aid products that not only help protect life but also advertise your concern about the safety of your clients. These products comply with and even exceed current **international safety regulations**, so we use the best raw materials and test them repeatedly to ensure they meet the **highest levels of safety**. And, just as you'd expect when you buy quality, we never compromise our production standards. These are based on principles of dialogue and transparency, are informed by respect for both our employees and customers and are certified as conforming with the appropriate environmental regulations.

You won't get safer more easily; nor will you find a more visible way of promoting your image. And if you have any doubts as to which of our products best suits your purpose, feel free to work things out with us before ordering.

Reflective products help prevent accidents but if they do happen then our range of **first aid kits** can be at hand to give you immediate assistance.

Have a safe promotion!

RFX™

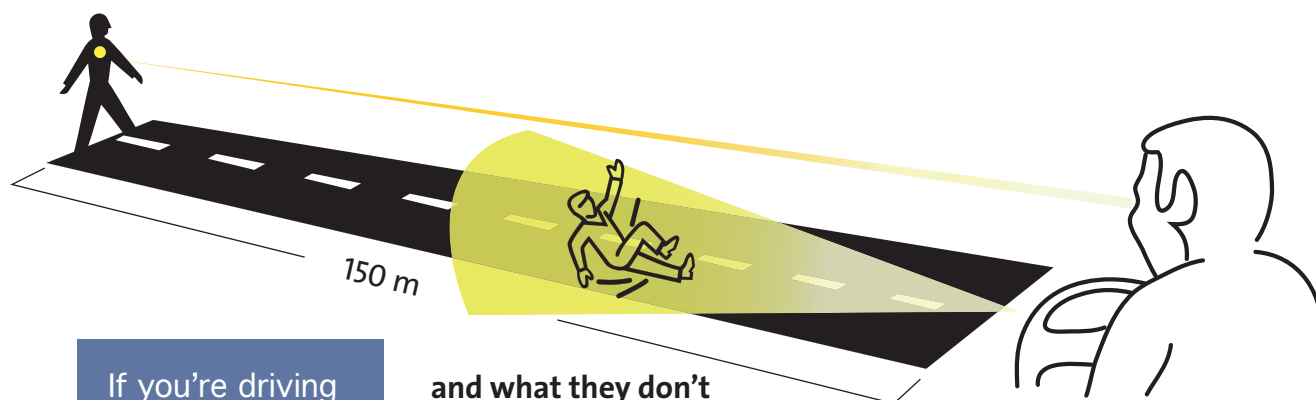

RFXTEX™

RFX+CARE™

What we're aiming at

ALL REFLECTIVE PRODUCTS have an overriding purpose: the prevention of accidents. By making people visible, reflective products help prevent loss of life, personal injury and damage to property. RFX™ products are designed and manufactured to comply with international regulations for personal safety items and they've been tested and certified as complying with the relevant European standards (EN) developed by the European Committee for Standardization (CEN).

What drivers see

If you're driving
at 90 km/h you
need 64 metres
to be able to
brake safely

EN 13356: 2001 is the standard relating to products, such as reflective traffic safety accessories, that are to be worn or carried by individuals to make them more conspicuous to other road users under low light levels.

There are two standards relating to the performance requirements for clothing capable of signalling the users presence visually:

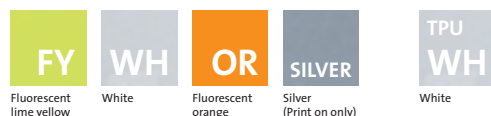

EN 1150: 1999 which covers high visibility garments used for non-professional activities; and

EN 471: 2003 which applies to high visibility warning clothing used for professional activities.

Both EN 1150 and EN 471 standards apply to clothing intended to provide conspicuity for users in hazardous conditions by day and under illumination by vehicle headlights in the dark.

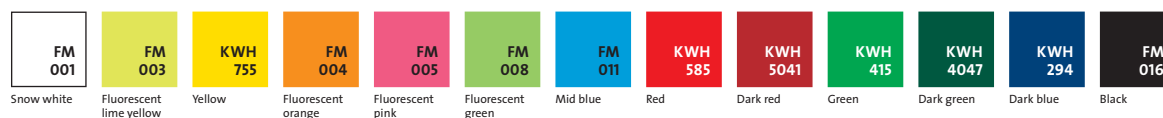

Colour options

Reflective base colours

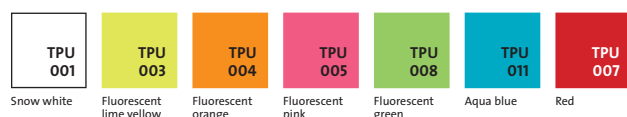

By specifying environmentally friendly TPU (thermoformed polyurethane) reflective material you avoid using PVCs

Fill layer colours

TPU Fill layer colours

Print options

PRINTING ON the surface of the film decreases the reflective area and can compromise visibility.

PRINTING BELOW the film gives you a reflective surface with an efficiency factor of 100%.

RFX™ Film used to produce RFX™ accessories is identified with laser-etched RFX™ security marks guaranteeing that it is produced to the highest reflective standards

SlapWraps

Maxi SlapWrap **MXSW-7-4400** 30 x 440 mm

SlapWrap **MXSW-7-3800** 30 x 380 mm

SlapWrap **SW-7-3400** 30 x 340 mm

SlapWrap **SW-7-3100** 30 x 310 mm

SlapWrap **SW-7-2600** 30 x 260 mm

Mini SlapWrap **MSW-7-2200** 30 x 220 mm

We're happy to meet your specific requirements for SlapWraps, but if you want to use them for safety campaigns we recommend they be at least 340 mm long

Meeting the standard

What they are

SLAPWRAPS not only provide 360° visibility, but they're also fun and ideal media for carrying **promotional messages**. Additionally, by using SlapWraps certified to meet the EN 13356: 2001 standard you make traffic safety a feature of your campaign.

How they work

Slip

Slap

Wrap

What you can do

SlapWraps can be printed on the reflective film and below it, as well as on the reverse, using a screen-printing process. **Printing below** the film gives you the **optimum reflective capacity** required to meet the EN 13356: 2001 standard. **Printing on** the reflective film **can compromise the reflective efficiency** of the SlapWrap; to meet the requirements of the standard the print area should be less than 10% of the total external surface area.

XL, XXL, Tear-off

WE'RE ABLE TO SUPPLY a wide range of **SlapWrap variants** to meet your specific requirements. Because they're more visible, **XL and XXL** sizes are particularly suitable for special events.

Using the reverse

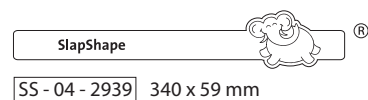

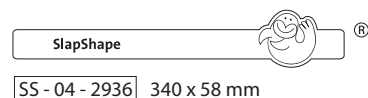

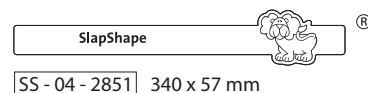

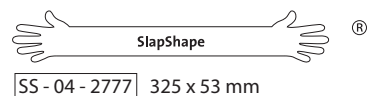

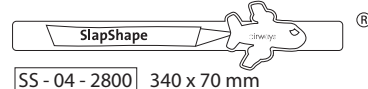

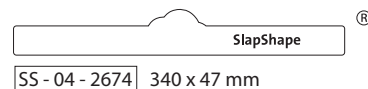

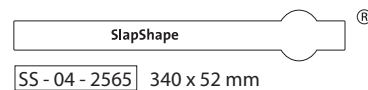

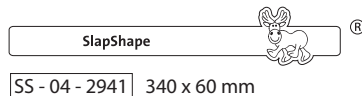

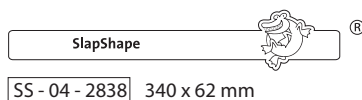

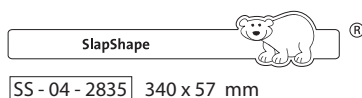

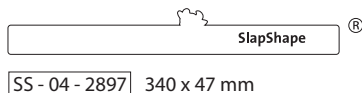

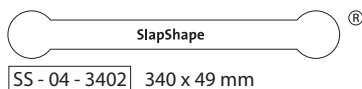

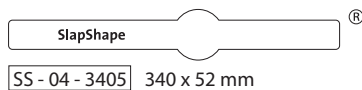

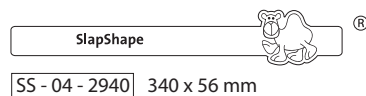

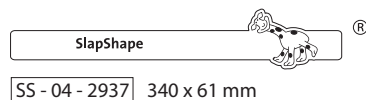

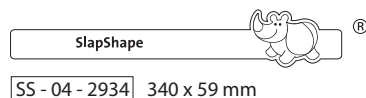

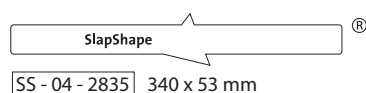

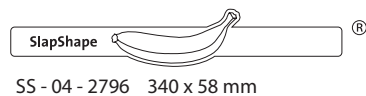

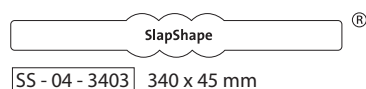

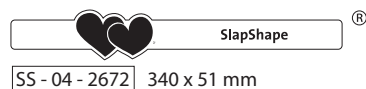

TO CONVEY A MORE COMPELLING MESSAGE it's possible to print on both sides of SlapWraps and rather than the standard flock backing we can use a film backing, making your message double sided.

Tear-off tabs

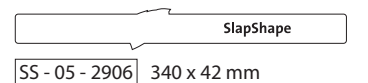

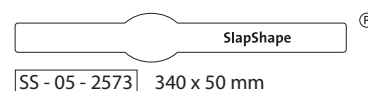

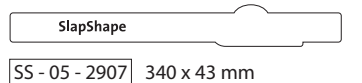

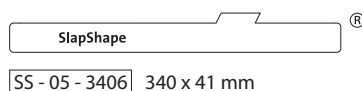

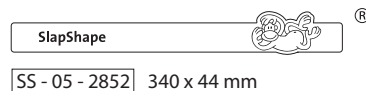

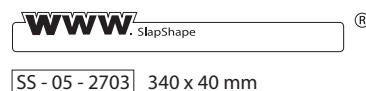

THE TEAR-OFF TAB SlapWrap is ideal for use where interactivity with your client is a must. For example, at club events where entry comes with a free drink from the bar or at lotteries and auctions where you need to cross-check participating individuals.

SlapShapes®

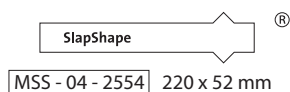

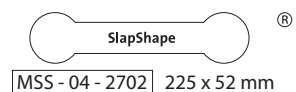

SlapShapes® SS-4

SlapShapes® SS-5

Mini SlapShapes® MSS-4

Forming the shape

THE SLAPSHAPE® is a SlapWrap with a profile formed using **our registered process** to give you a distinctive promotional item that takes the SlapWrap concept just one step further.

AS WELL as our standard SlapShape® profiles, we're able to make **customised profiles** to reflect the specific shape requirements of your logos and messages. Just let us know what you want and we'll give you a solution.

When designing your customised reflective accessories it's important to remember that the print area has a 3 mm border

Kids must be seen

HANGERS ARE EFFECTIVE and popular safety devices for enhancing the **visibility of children** in all weather conditions. With their high performance reflections, they ensure that children are highly visible on the street and in the playground.

Measuring reflection

WHEN WE RECEIVE YOUR DESIGN for a hanger or a sticker we measure the reflective area of the surface to ensure it has a **minimum reflecting surface of 15 cm² on both sides** in accordance with the requirements of EN 13356: 2001.

It's worth remembering that promotional reflective accessories complying with EN 13356 are traffic safety items, not gimmicks

Explaining our inventory number code

XXXXXXXX

All non-reflective accessories in this catalogue are identified by an unique inventory number.

Hanger variations

Twister hangers

TWISTER HANGERS are paired hangers, the internal surfaces of which can be written on, rather like reflective luggage tags. In Denmark we use twister hangers as rewards for kids who have passed a road safety test.

WH	FM 001	H-07-2875-2876 4 colour print - under

----	---------	-------------------------------------

Travel tags

WHILE it sometimes seems that all baggage is beginning to look the same, your message or company logo can really stand out on airport baggage claim conveyors with a reflective travel tag. And with reflective tags identifying their bags, your customers will be all the happier for having carried your message.

Attachments and packaging

WHILE OUR HANGERS are usually supplied with string/safety pin fasteners, it's possible, by using an alternative attachment method, to convert standard hangers into customised key ring tags or mobile phone reflectors.

You can choose between **three fastening options**: the standard string/safety pin; a chrome-plated ball chain; or a string/sprung hook attachment. All items are pre-packed in re-sealable polyethylene bags. With orders exceeding 50,000 units we can reinforce your message with a personalised message printed on the packaging.

Small product, high value

EVERYONE BENEFITS from being visible. In fact anyone enjoying outdoor activities is a potential customer for reflective products. **Reflective stickers** are ideal for use in high penetration campaigns on restricted budgets. You can either use our standard shapes or **design your own**: just send us an outline of what you'd like produced and we'll get back to you with a range of options.

Hard reflectors

IN PRODUCTION since the 1960s, these double-sided hard hangers are still just as efficient reflectors. Hard reflectors can be silk-screen printed with logos and messages and they also comply with the EN 13356 standard.

For that authentic retro look there's nothing like the reflective hard reflectors. These evolved during the 1960s from reused bicycle rear-reflectors into essential counter-culture ornaments

Adding value

Packaging and presentation add value to not only your message but to your image. You can add impact to your personalised SlapWraps, SlapShapes®, hangers, stickers and badges by packaging them in customised paperboard sleeves or enclosing or attaching them to cards. Packaging can be designed specifically to complement the design of your reflective accessories and printed using an accurate four-colour process. The resulting items let you to tell your story in your own way and can be used in mass mail-outs, as greeting cards, product cards or compliment slips.

Standing out

Reflective badges

PROTEST MARCHES, electoral campaigns and promotional events all have one thing in common: a message. What better way to convey it than through that reliable standby of past campaigns: the pin-on badge. By having them reflective you make an old idea new and stand out in the crowd.

Sporting times

FLEXIBLE HIGH VISIBILITY BANDS have hook and loop fasteners to make sure they stay around moving legs and arms. The welding grids can be adjusted to accommodate your logos and messages.

WE'VE RECENTLY INTRODUCED a range of **LED bands**: these items not only reflect light but also emit it through four flashing LEDs, activated with a push button switch and powered by a long-life quartz battery.

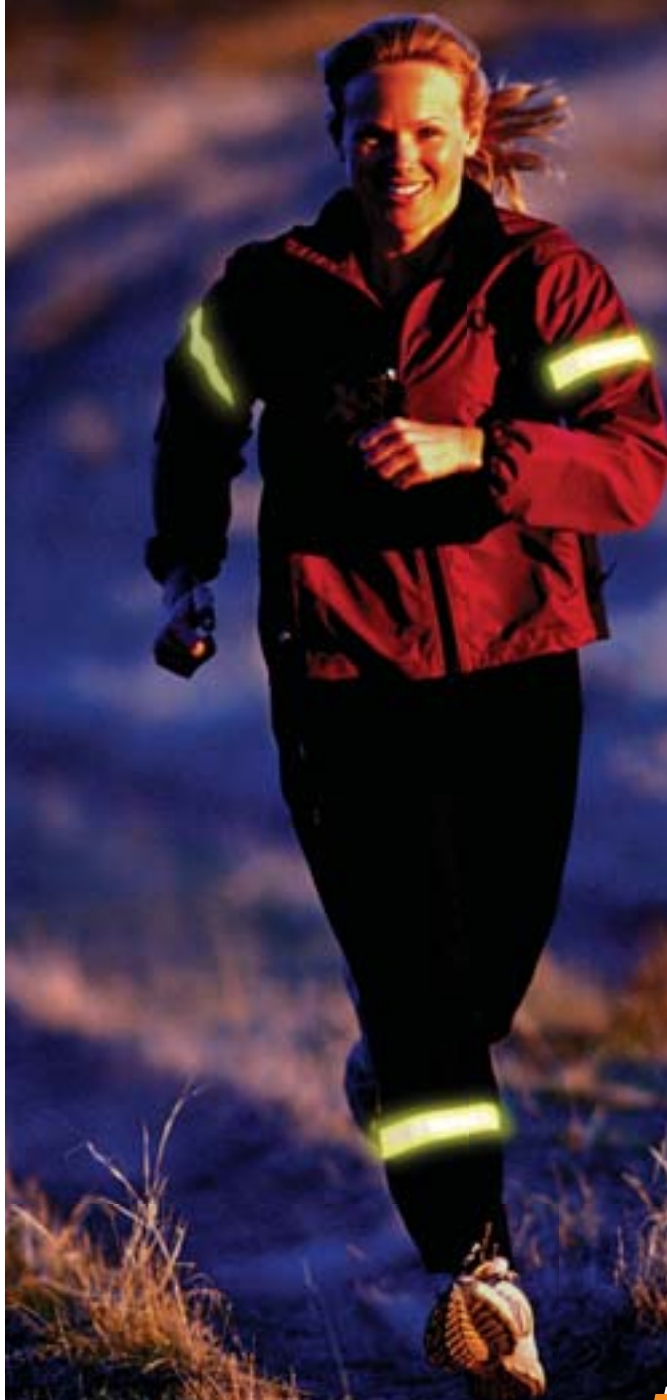

WE'RE ALWAYS ON THE SEARCH for innovative traffic safety products. One of our latest lines is a **LED hanger** that, quite literally, flashes in the dark through three miniature LEDs embedded under the reflective film.

Marathon runs

MOBILE ARMBANDS® are reflective devices that allow joggers a **hands-free** way of carrying mobile phones and MP3 players. This promotional product has the branding option of either printing or blind-stamping your company name, logo or message onto the reflective strap.

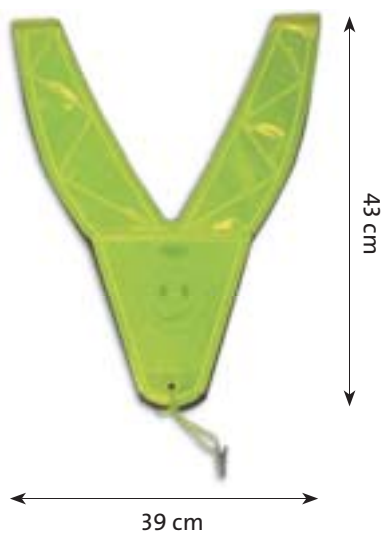

JOGGING BAGS allow joggers to carry essential items without cramping their style. Because they're made from **high visibility fabrics**, these jogging bags also serve as traffic safety accessories and when branded with corporate logos and messages as highly visible promotional media.

GYM BAGS are lightweight shoulder bags made of high visibility fabrics with a drawstring opening designed to carry larger items such as water bottles and warm up vests. **Visibility is enhanced** by a reflective strip located on the rear of the bag, below your logo or message.

LANYARDS allow joggers (and others) to carry a host of light objects: from keys to identity cards. Because they're reflective they're not only easier to see in the dark but also **easier to find** when they're lost.

The Sam Browne belt is named after an officer in the British Indian army during the 1800s. Losing his left arm in battle, Browne invented the belt so that he could still carry a sword

WH	FM 011	WH	FM 005

Cycling around

THE RFX™ COLLAR is a reflective safety product with a large printing area for promotional messages that's available in either high visibility fabric or reflective film. Because it's smaller and handier than a safety vest, the collar **is ideal for kids**. You can choose between a full reflective collar and a more economical version where only the front triangular flap is reflective. Both versions have a clip fastening for securing the collars to clothing and the film versions have pre-determined shoulder breaks for additional safety.

CYCLISTS, equestrians and joggers favour reflective Sam Browne belts for their **adjustable qualities, lightweight properties and ease of wear**. The last thing you want to be wearing when you're building up a sweat is an all-encompassing garment; Sam Browne belts offer an ideal remedy for that situation.

Animal alert

ANIMALS are as at risk from traffic as are people. With this in mind we decided to make a line of **reflective bands for pets**: from cats and dogs through to horses and cattle. We're not all that surprised that this range has been **a great success with the pet food and veterinary industries**: it's an ideal promotional match.

Playing the game

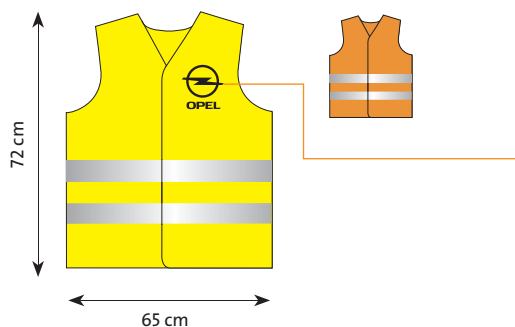

THE PT2000 SAFETY VEST for children between 2 and 10 years old has proven popular in campaigns, such as **walking school buses**, that involve kindergarten and school children. Conforming to the European Standard EN 1150: 1999 (the standard applicable for non-professional use), the vest not only increases visibility and, with its elasticised hook and loop-type fasteners, is easy for kids to use. It's available in the standard colours of fluorescent yellow and orange although, by special request, we can supply it in pink or green.

THE PT2000 SAFETY VEST for adults is ideal not only for enhancing the visibility of pedestrians and cyclists on the street but also, when printed with logos and brands, as give-aways at sporting and other outdoor events.

Break down

THE HW2 AUTO VEST is designed to make the EN 471: 2003 standard for high visibility warning clothing available to drivers. This high visibility garment is suitable for use by motorists, bikers and pillion passengers. When vehicles break down, **high visibility vests**, together with warning triangles, become essential road safety items. The auto vest comes in a standard size and is washable. Vests can be customised with full colour logo and message transfers and provided with re-useable customised storage pouches and bags.

The RFX+CARE first aid systems

RFX+CARE™ first aid kits are produced to the highest possible standards; from raw material to the finished product, we do our utmost to ensure you get the best. All our **first aid kits** are manufactured and packaged at our own factories **in compliance with relevant European health, safety and environmental protection directives**. Production complies with EN ISO 13485: 2003, the international standard for medical device regulations, as certified by TÜV SÜD. This ensures not only that you are **purchasing from an internationally certified producer** but also that we are able to guarantee superior products at highly competitive prices.

THE RFX+CARE™ range of first aid kits comprises two discrete lines: the RFX+CARE™ systems (systems 1-8) and the RFX+CARE™ DIN 13164 standard system. These systems are made up of complementary first aid products that are packaged in polythene bags and identified clearly with reference numbers and pictograms illustrating both the contents and their use. Each RFX+CARE™ kit has been designed on the advice of emergency medical services organisations for use in a variety of situations: in vehicles, on sports fields, around the home and at rock festivals.

We can also customise first aid kits to suit your special requirements with a range of optional extras.

Optional contents

WHILE OUR FIRST AID KITS are designed to suit a broad range of users it's always possible to **supplement** kits with other first aid supplies in response to specific users and circumstances.

Promotional plasters

CUSTOMISED, adhesive plasters are a simple but effective way of demonstrating your concern for safety. **Plasters can be decorated** a range of four colour printed designs from corporate logos through to cartoon characters. Each plaster is individually encapsulated and can be supplied in a wide selection of packaging including four colour print card folders and boxes. We recommend a minimum order of 50,000 units although smaller orders are possible.

Production details

Printing information

Our standard printing process is screen-printing based on the Pantone colour system. While every effort is made to reproduce the ink colours you specify we cannot guarantee an exact colour match. Our screen-printing process realises a level of 34 dpi for four-colour prints.

In response to your requests, we are now able to offer offset printing for orders over a specified minimum. Please enquire for further details.

Printing on high visibility garments

We use heat transfer technology for printing on high visibility garments. Artwork should be submitted in accordance with our standard procedure. We can print up to 5 colours using this process.

Submission of artwork

All artwork must be submitted by email; all artwork and fonts must be converted to outlines/paths (vectorised). We accept .eps, .ai or .pdf file types.

It is the customer's responsibility to ensure that emailed electronic files are sent in a useable format. All artwork will be held on file for 12 months. Repeat orders submitted after this period will new artwork and will incur a further set-up charge (please refer to the order number of the previous order).

Over/under runs

A standard 5% over or under run will be deemed to complete an order. Because our products are made to order, a surcharge of 5% will be imposed if you specify an exact quantity to be delivered.

Pre-production samples

Pre-production samples are available on request at nominal cost plus standard origination (tooling and artwork processing) charges.

Returns

Claims or complaints against delivered orders should be notified to us verbally within 48 hours of receipt of goods. No returns will be accepted without an 'authorisation to return' label which be obtained from us only after the complaint has been notified.

CE marking

We recommend strongly that for safety promotion campaigns you use only those reflective products that have been marked as being certified. Traffic safety products are certified as conforming to the stringent requirements of the EN 13356 (reflective accessories) and the EN 1150 and EN 471 (high visibility garments) standards.

Standards and certification

European standards (EN) are prepared by the European Committee for Standardization (CEN) under mandates from the Commission of the European Union and the European Free Trade Association. Implementation of these standards is mandatory within EU member states. All products complying with these standards must be marked with both the CE mark and the relevant standard number.

Accessories (EN 13356: 2001)

The EN 13356 standard covers three types of accessories:

- Type 1: Free hanging items (such as our hangers);
- Type 2: Removeable items (such as our SlapWraps and jogging bands);
- Type 3: Mounted items (such as our stickers)

Accessories are required to meet both the surface area and the reflective requirements of the standard. When mounting the reflective component on a garment the surface area of the accessory shall be such that the specified reflective value requirements are met. The surface area for type 1 accessories shall be between 15 cm² and 50 cm² per side. If a type 1 accessory is reflective on two sides then the thickness of the item shall be a maximum of 10 mm. Each type 2 and type 3 accessory is required to have a surface area in excess of 15 cm².

The EN 13356 standard specifies the optical performance requirements for accessories that are worn, attached to or carried by persons and that are designated for non-professional use.* Visibility accessories complying with this standard are intended to signal the user's presence visually when illuminated by vehicle headlights on dark roads. The standard is not applicable to garments.

Safety garments (EN 471: 2003 and EN 1150: 1999)

The EN 471 standard specifies a set of requirements for high visibility warning garments for use in the workplace – that is for professional use – and the EN 1150 standard provides details of the performance of high visibility warning garments for non-professional use, together with criteria for minimum areas and placement of reflective material to achieve enhanced conspicuity. * Garments conforming to either of these standards are capable of signalling the user's presence visually and are intended to provide conspicuity for the user in situations under any light condition, both by day and under illumination by vehicle headlights in the dark.

EN 471 standard garments are categorised according to the level of conspicuity they provide:

- Class 1: Garments that provide the lowest level of protection;
- Class 2: Garments providing an intermediate level of protection; and
- Class 3: Garments providing the highest level of protection.

Each class has minimum areas of reflective materials incorporated in the garment in accordance with the specifications for EN 471-03. Garments comprise the required areas of background material and retro-reflective material or, alternatively, the required area of combined performance material.

EN 1150 standard garments comprise the required areas of background materials and retro-reflective materials or, alternatively, the required area of combined performance material in accordance with specific minimum areas of exposed material calculated according to the height of the wearer.

Medical devices and accessories (EN ISO 13485: 2003)

The EN ISO 13485 standard specifies quality assurance system standards applicable in the production of medical devices and accessories. For further information concerning the applicability of this standard see 'Quality assurance' below.

* Non-professional use such as when the garment is used at athletics events, by children and cyclists.

Quality assurance

Production of all RFX + CARE medical devices and accessories is undertaken in conformity with the requirements of the Council Directives concerning medical devices 90/385/EEC, 93/42/EEC and 98/79/EC of the Council of the European Communities. These directives are implemented through Council Decision 93/465/EEC concerning the modules for the various phases of the conformity assessment procedure and the rules of affixing and use of the CE conformity marking. Two of the modules cited in the Council Decision (D and H) require that 'the manufacturer must operate an approved quality system'. The scope of the quality systems required by these modules addresses: production, final inspection and testing (D); and design, manufacture and final product inspection and testing (H). Organisations wishing to implement quality management systems in conformance with modules D and H use EN ISO 13485: 2003, *Medical devices – quality management systems – requirements for regulatory purposes*. This international standard specifies requirements for a quality management system that can be used by an organisation for the design and development, production, installation and servicing of medical devices, and the design, development and the provision of related services. The international standard is based on a process approach to quality management. The international standard specifies requirements for a quality management system where an organisation needs to demonstrate its ability to provide medical devices and related services that consistently meet customer requirements applicable to medical devices and related services. The production of RFX+CARE branded medical devices and accessories has been audited and certified as conforming with the requirements of EN ISO 13485: 2003 (without design) by TÜV SÜD Product Service GmbH.

Intellectual property

A number of products in the RFX™ range are protected under international and national intellectual property legislation. Our rights in respect of those items in this catalogue marked ® and those trade marks marked ™ have been asserted under international law. Should any infringement of our intellectual property in respect of these items or trade marks be detected, we reserve the right to institute legal action against any party in breach of our asserted right.
