Birkenstock. Comfort four your feet.

Dear reader,

our family business looks back on a tradition-laden history during the course of which our knowledge of the shoemaker's handicraft has been collected, continuously optimised and passed on from generation to generation. For more than 230 years, it has been the objective of each Birkenstock generation to offer high-quality products that support and maintain the natural functions of the feet.

The basis of our sandals, clogs and shoes is the flexible cork deep footbed invented by us, which is modelled according to natural footsteps in the sand and practically gives you a feeling of walking barefoot. For an optimal fit we offer our footbed in two widths. Because many shoes are far too narrow for the natural shape of the feet. Due to the two-width system, you can choose a model that is optimally adapted to your feet and that still offers enough space for your toes – the normal width for normal feet, the narrow width for particularly slender feet.

Due to an environmentally safe "Made in Germany" production, our highly-specialised production facilities and the use of selected, high-quality and therefore durable materials, we contribute to environmental protection. For more information on this topic, please refer to page 43.

On the following pages we are proud to present our collection for 2008. It includes several new products, such as three new beautiful leathers in antique blue, antique brown and red, for example.

You have not experienced Birkenstock comfort personally yet? If not, we recommend that you get to know Birkenstock products at your friendly local dealer. We will be happy to give you the address – get some advice on our products. All products are available from stock and can also be ordered in single pairs by the specialised dealer.

And now, just relax and enjoy our new catalogue. Kind regards,

Your Birkenstock team.

The Birkenstock-Fitness-Sandals

The first Birkenstock sandals were launched in 1964. Their name: "Fitness Sandals". Today, this model is also known under the name of "Madrid". The original name appropriately describes the function of this model. Because Birkenstock Fitness Sandals offer you a bonus: they exercise your feet and legs with every step you take.

And this is how the Fitness-Sandals work:

The relationship between the strap and footbed causes a gripping reflex of the foot with every step taken. During the

gripping reflex, both the feet and ankle muscles are tensed. The muscles are then totally relaxed again when the heel is set down. In this way, there is constant tensing and relaxing of the muscles with every step taken with the Madrid model. Gentle exercise for your feet and legs. In addition, the circulation of the legs is boosted. The model "Ibiza" also has this effect- you can choose either of the models.

The "toe-gripper" helps return the toes to their natural position.

The Birkenstock footbed is flexible and facilitates the relaxation of muscles when the heel is set down.

Switch to Birkenstock

Every day we take an average of 10,000 steps on hard floors. A substantial strain on our feet, as they have to bear the entire body weight. This is why it is so important to indulge our feet. The Birkenstock footbed is modelled

to footsteps in the sand and is practically almost like walking barefoot. A natural relaxation of the muscles is guaranteed when the heel is set down. Treat your feet to the unique Birkenstock comfort.

Perfection down to the very last detail

In every Birkenstock product you will see our love for detail reflected. For example, the “Pisa” model has delicate straps, carefully interwoven by hand, giving them an interesting appearance. In addition, every one of our products is subjected to strict quality controls before leaving our manufacture.

Kind to your feet

The “Bali” model is made of finely punched leather, giving it a feminine note. The “Rio” model is for those preferring a sporty look. We use 3 millimetres strong, soft upper material for both models. Both models have a slim, individually adjustable back-strap, which gives you additional support when walking.

Birkenstock slippers

The “Davos” model is for everyone who wants to enjoy Birkenstock comfort at home. The uppers and footbed liner are made of Birko felt® – a very soft felt material specially developed for Birkenstock. It has active breathing qualities, is gentle to the skin and guarantees a healthy foot environment. There is plenty of room for the toes, making it possible to wear the “Davos” model comfortably even with thick socks. For example, the slipper profile prevents small stones from getting stuck in the sole. Style “Davos” is available in two colours and is also available for children.

The “Boston” model has a strap with a buckle which can be individually adjusted, ensuring a perfect fit. The cover sole made of fine suede leather ensures a comfortable fit and a healthy foot climate. Because of its sole with the regular Birkenstock profile, this clog is suitable for both indoor and outdoor wear.

Comfort for children's feet

Important parts of a child's foot skeleton are still soft and flexible. Therefore it is important that children's feet receive the correct support by means of suitable shoes. The original Birkenstock footbed elastically supports every step, achieves perfect pressure distribution and ensures anatomically correct and natural walking.

The Original Birkenstock-Footbed

1. Deep heel cup

Gives the foot a firm hold and maintains the heel profile.

2. Cross arch support

Helps shift pressure from the middle to the front of the foot.

3. Inner and outer longitudinal arch supports

Give the feet balance in walking.

4. Toe gripper

Steers the toes, promoting the natural rolling movement of the foot.

5. Cork-Latex-Footbed

Extremely flexible, providing a uniquely high level of wearing comfort.

6. Suede leather cover

Creates a healthy climate around the foot.

7. Footbed edging

Deliberately elevated to protect the toes.

The perfect fit through two widths

for normal,
sturdy feet

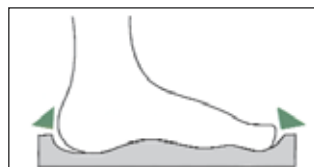

for slim,
slender feet

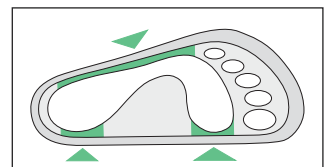

The proper length and width

For a shoe to fit perfectly, it has to have the proper length and width. When making your purchase, be sure that your foot has enough room in the width as well as several millimetres of space in the toe and heel areas to allow you to move freely.

Our tip: always try on new Birkenstocks while standing, leaving the straps unfastened – you'll find it easier to determine the ideal width and length for you. As a result, you'll have a better posture and your Birkenstocks will last longer.

1) The proper length

2) The proper width

WWW.DANSKERHVERVSBEKLAEDNING.DK

Cross section of the footbed

There is a soft, anatomically shaped cork latex core between the various jute layers. The lower jute layer provides stability while the upper, denser jute layer absorbs moisture. Layering these together along with the suede leather cover sole ensures an optimum "climate" for your feet and unsurpassed wearing comfort.

- 1) Suede leather cover sole
- 2) Upper jute layer
- 3) Cork-latex-core
- 4) Lower jute layer
- 5) Outer sole

Elastic and durable with breathing qualities

The foundation of each Birkenstock model is the footbed fashioned from natural and renewable materials. For this, we use cork from cork oak bark. Cork has impressive characteristics: it is light, heat and cold insulating, has an antibacterial effect, absorbs moisture, and has a high degree of elasticity and excellent insulation properties. Therefore cork is the perfect material for our footbed.

The latex milk gained from the bark of the caoutchouc tree is processed in numerous processing steps under strict control into the bonding agent that holds the granulated cork of the Birkenstock footbed together. Due to its high degree of elasticity and tensile strength, latex keeps the footbed permanently supple and durable. The textile plant fibre jute also first has to be roasted, peeled, combed and cleaned, before being spun into fabric to stabilise our footbed and absorb moisture.

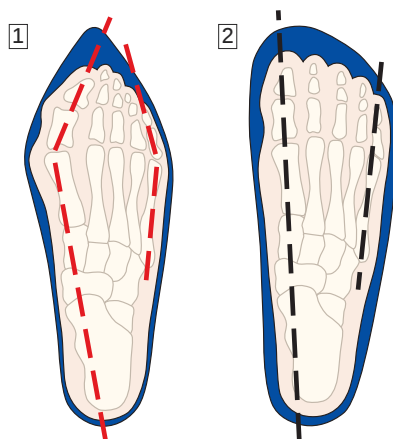

Suede leather in one piece and stamped (1), cork bark, stamping residue and granulate (2), fine and coarse jute (3) and latex milk (4) – natural materials for our footbed.

The Birkenstock-fit

No other part of the body is subject to so much strain during the course of a lifetime as our feet. They maintain the body's balance, absorb impacts and bear the entire weight of the body. Therefore it is essential to support the feet as well as possible – with Birkenstock. The secret of the special Birkenstock comfort is the unique fit. Because the Birkenstock footbed – available in two widths – has been designed to mirror the shape of a healthy foot. It supports you right where you need a firm hold but still gives you enough room to move freely. This enables you to comfortably walk or stand on Birkenstock products for hours.

The perfect balance

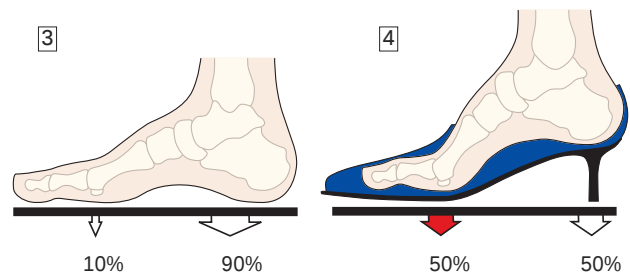

Many shoes are far too tight for the natural shape of the feet. They restrict the toes and the pressure on the foot is not evenly distributed. The possible consequences are pain and deformation of the feet. The original Birkenstock footbed is modelled according to the natural shape of a healthy foot and distributes the body weight evenly between the feet. It also gives the feet a firm hold and allows free movement (Fig. 2).

The cross-section clearly depicts how wearing shoes that are too narrow forces the foot to assume an incorrect posture, which, in the long run, can lead to the formation of bunions and a crooked big toe (see Fig. 1).

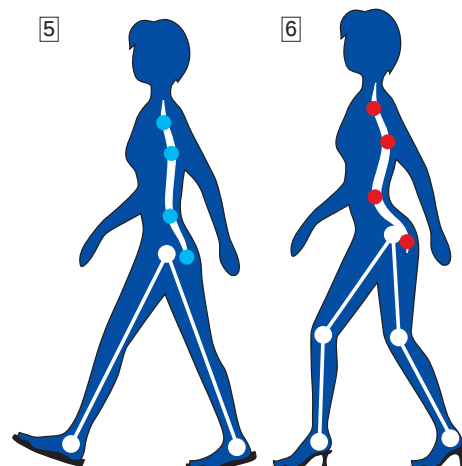

Perfect weight distribution

Sandals and other heelless shoes enable you to walk naturally and help you to assume natural body posture (Fig. 5): your calf muscles relax allowing for 90 per cent of your bodyweight to be supported by the rear of your foot – in particular by the heel bone, the foot's strongest bone

Unhindered by pumps, the strong heel bone can fulfil its function of carrying our bodyweight (Fig. 3).

Pumps unnaturally shift our overall bodyweight forward. The small bones in the midfoot are pushed forward, and result of walking on unprotected bones is pain (Fig. 4).

Walking in pumps leads to an abnormal posture: the pelvis tilts forward and the spine is crooked. This can lead to severe back pain and intervertebral disc damage (Fig. 6).

(Fig. 3). The heel bone works as a natural shock absorber with every step you take. It is equipped with a strong layer of protective tissue that cushions every bit of physical impact. A pump works differently: bodyweight is shifted forward – forcing the ball and front of your foot to carry up to 50 per cent of it (Fig. 4). Toes and the midfoot bones are subjected to excessive stress, causing the calf muscles to contract. The body assumes an unnecessarily crooked position – with the pelvis tilting forward and the spine contorting in an unnatural position. Switching to heelless shoes is therefore advisable to avoid foot, leg and back injuries. We recommend: pumps when necessary - Birkenstocks as often as possible.

High level of wearing comfort with thong sandals

Our thong models guarantee a perfect fit. This type of sandal has existed for thousands of years, as the function of this model was recognised as the perfect solution throughout history. We have adapted and redefined the Egyptian thong sandal to modern standards and requirements. The fine construction of our thong, which was specially developed for the deep footbed, complies with the anatomy of the foot in the best possible fashion. Exceptional wearing comfort that is felt right from the beginning.

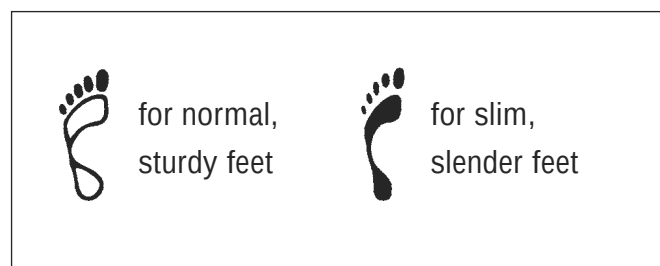

The Birkenstock thong is naturally enclosed by the toes and gently helps return the toes to their natural position after having been painfully constricted by fashion shoes that are far too tight. For this reason we recommend the normal width for these models. The narrow footbed is only suitable for extremely slim feet.

Two-width system

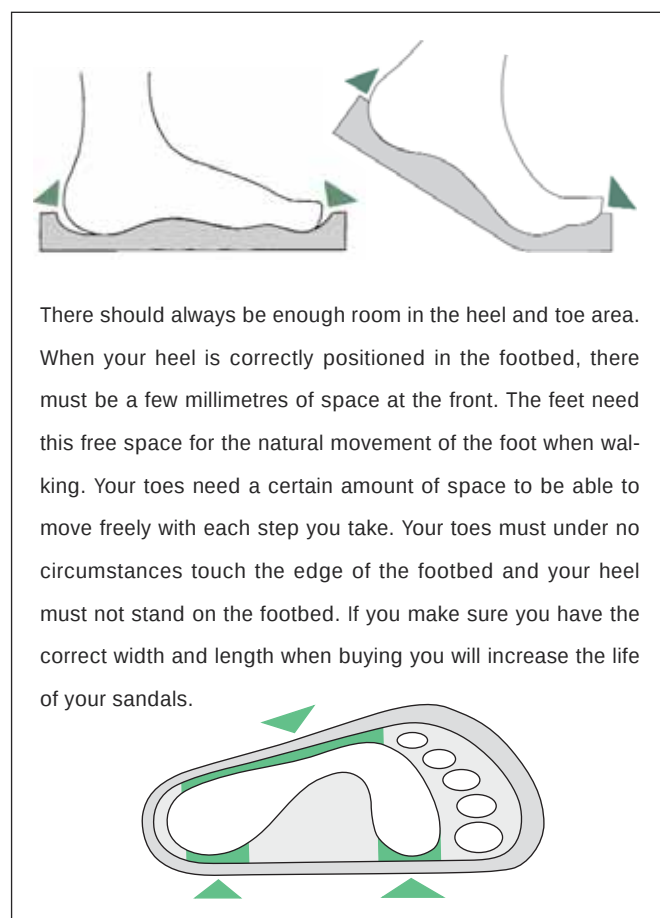

Our longstanding experience in the shoemaking business has shown us that most people are not satisfied with the fit of their shoes. This results from the fact that many shoes are made in various lengths, but not in various footbed widths. For this reason we offer our deep footbed in

two widths: normal width for normal feet, narrow width for particularly slender feet. Our upper materials are perfectly adapted to the respective footbed widths for a perfect fit.

In combination with the adjustment options of the straps using the buckles, you can perfectly and individually adapt our models to your feet.

Look at the corresponding width symbols and convince yourself of Birkenstock's unique fit.

Birkenstock quality

After more than 230 years of experience in the shoemaking trade and the knowledge collected and traditionally passed on through the generations, we are able to guarantee the highest quality and best possible processing of our shoes.

For our leather models we use cow leather with a thickness of 2.8 to 3 millimetres only. As it is not split, all the valuable qualities such as the typical surface structure, toughness and durability of this natural material are preserved. Leather of this thickness is not readily available everywhere. Due to the particular breed and husbandry conditions of the cattle as well as the climatic conditions, only leather originating from Central Europe meets our

Birkenstock only uses high-quality leather with a thickness of 3 mm

criteria. In addition, we only buy from tanneries which comply with the strictest environmental regulations. Moreover, our strict quality controls ensure that only perfect pieces of leather without flaws are used. Leather with such blemishes that may be caused by mosquito bites, tick bites or thorn scratches are sorted out.

Selected materials

When selecting the raw materials for our footbed, only the best natural materials are used: Cork, latex and jute.

Many complex processing steps are necessary before the high-quality natural cork is ready for use in our products. First of all a layer of bark at least five centimetres thick is peeled off the cork oak tree – a process only re-

peated every nine years under strict supervision, thus even stimulating the growth of these trees. In order to make the cork hygienically pure, the bark is boiled tho-

Carefully peeled: bark from the cork oak

Valuable resource: bark of the cork oak

roughly in a water basin. It is then cut into strips, from which bottle corks are punched. The cork residues are ground several times and sieved to grain size. We only use the purest and most expensive cork of extremely high quality in production. All extraordinary characteristics of natural cork as a raw material – its high degree of elasticity, excellent insulation qualities, outstanding insulation against heat and cold and the absorption of moisture – are used by us for the manufacture of our world-renowned footbed.

Latex is the natural bonding agent for cork footbeds. It is withdrawn in doses by perforating the bark of the caoutchouc tree. This allows the rubber milk to escape. Here, too, reaping is done gently, so that the ecological circulation is not endangered.

Jute ensures an additional stabilisation of our footbeds and improved moisture absorption.

All of these raw materials are specially grown for our requirements. Thus no natural resources are being exploited, but especially created.

Perfection is our trade mark

A further quality feature that distinguishes Birkenstock from other brands is the elongated cut of the upper ma-

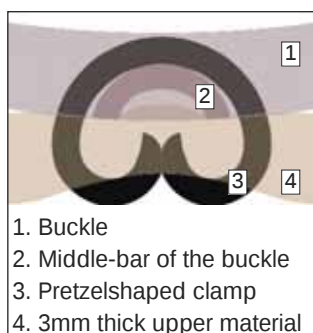

For an improved hold: an elongated cut

terial toward the heel. This holds the feet firmly in the foot-bed and brings them into a perfect position when the heel is set down during walking.

Quality from the buckles...

Four clamps – for optimum hold

We take the greatest care in the manufacture of our buckles. Due to the precise shape of our buckles, the strap lies neatly and exactly on the sandal – the buckle and the upper material perfectly combine into one unit. Each

buckle is protected against corrosion with multiple layers of baked-on enamel – and is thus well equipped for a long life. The clamps attaching the buckles to the upper material are curved inwards so that they cannot be felt. For an optimum hold, large buckles are clamped in four places. Birkenstock buckle material is extremely strong in comparison with other fastening systems, thus having a high tensile strength – for best possible safety. Furthermore they are variably adjustable and offer optimum hold in any adjustment position.

...to the sole

We place great value on our soles. They consist of ethyl vinyl acetate (EVA) and are distinguished by a high degree of abrasion resistance and insulation properties. This prevents extreme single-sided wear – and as a result also postural defects.

A cross-section of our EVA-sole (significantly enlarged)

The right shoe for any foot – special Birkenstock models

Correct foot support has been our speciality for generations. But creating the right shoe for any foot means more than simply finding the right length and width. We are one of the very few manufacturers able to offer custom designs at a low extra charge. Because we want to help you to make your individual ideas become reality within the scope

of our possibilities. Of course we can also help you if you need different shoe sizes or widths for each foot, if you need individual straps or heels made longer or higher. Contact us and ask for information with no obligations. We offer advice under the phone number: 0049-2645-942-100.

The Birkenstock-materials

The leather materials used by Birkenstock are especially thick – about three millimetres - and yet still supple. They are not split, thus maintaining all of their valuable natural properties. We do not use artificial dyes, but imbued leather – this way the leather remains open-pored with active breathing qualities. Although all leathers used by us are natural leathers, we differentiate the different optical appearances and handling in this catalogue using the following designations:

Natural Leather

Natural leather is identifiable by its typically different graining and colouring visible on the surface. We do not compensate these differences, so that the individual character of the naturally matt surface remains.

Smooth Leather

Our smooth leather feels very fine and even and has a slightly shiny surface. Due to its high degree of elasticity, tensile strength and resistance to abrasion, it is resistant to external influences, thus guaranteeing a long life. It is also easy to take care of and has breathing qualities.

Suede Leather

We only use extra-strong, highly durable leather for our suede leather shoes. Here too, the slight differences in the structure are the hallmark of real leather.

Nubuk Leather

For Nubuk leather the natural structure of the leather is buffed up, giving it a velvety look.

Embossed Leather

The bark-like surface structure gives the Birkenstock leather a particularly expressive character.

Birko-Flor®

Birko-Flor is a skin-friendly, tear-resistant, easy-care material. The upper layer of this material has a leathery structure and a soft fleece is built into the lower layer.

Birko-Flor®-Nubuk

A special finishing process gives this material a surface layer which doesn't just look like leather but feels like leather too.

Birko-Felt

Birko-felt is made of a woolpulp mixture and synthetic fibre felt. This mixture is practically untearable, but still permeable to air and skin-friendly.

Microfibre

The high-quality microfibre we use for our Birkenstock shoes has a delicate look that resembles Nubuk leather. This material is especially light, very permeable to air, durable and skin-friendly.

Birko-Flor®, Birko-Flor®-Nubuk und Birko-Felt are exclusively produced for Birkenstock.

Environmental protection as a central theme

Awareness to the environment plays an important role for us right from the very beginning. We were one of the first manufacturers world wide to almost exclusively use water-soluble and solvent-free adhesives in production. Over the last years we have successfully worked on the substantial reduction of the share of adhesives containing solvents. In 1987, the share of solvent-free adhesives in our production was 17 percent, in 1990 it already rose to 46 percent. Today, more than 95 percent environmentally friendly adhesives are used.

Investment in our future

We are the leader in the European market when it comes to investments in environmental technology. 30 years ago, long before people considered environmental protection, we were intensively involved in the subject of low-current and low-energy technologies. By our own development of special machines, the constant and ongoing development of production processes and the continuous improvement of production sequences, the energy consumption was reduced by more than 90 percent over the last years. Among other things the large-scale leather cutting machines have been improved, consuming only about ten percent of the power used by the former cutting machines, systems for the environmentally friendly generation of electricity and three large heat-power coupling units are used, which recover the heat produced during power generation and use it to dry our cork footbeds.

Recycling at every workstep

Our highly specialised production facilities place particular value on recycling. Thus, for example, the EVA stamping residues remaining after sole manufacture are shredded and processed into children's games and sports facilities or noise insulation walls along motorways. The leather residues – depending on their size – are either used in the production of accessories such as key pendants and folders or if smaller in the production of the alternative footbed covering material LEFA (leather fibre).

Make new out of old: Birkenstock repair-service

Birkenstock repair-service

On average, every citizen in Germany throws away a pair of shoes every two and a half months. Per year, this adds up to a total of approximately 400 million pairs of shoes, equivalent to approximately 130,000 tonnes of waste. A bulk of waste causing strain on the environment which could easily be avoided – for example, by using our repair services.

Please check the soles of your clogs or sandals regularly. But other components such as leather cover soles, straps or buckles can also be repaired or replaced.

Ask your retailer about Birkenstock's repair service. If there is no retailer close to you, you can send your shoes to us directly:

The Birkenstock Team will be happy to answer your questions at telephone number: 0049-2645-942-100.

Birkenstock-Chronicle

1774

Johann Adam Birkenstock is entered in the church archives of the parish of Langenberg/Hessen as a "shoemaker and vassal".

1896

The master shoemaker, Konrad Birkenstock, with two shoe shops in Frankfurt, starts to produce flexible footbed insoles.

1899

From now on and for the next 15 years, Konrad Birkenstock holds seminars and lectures for other leading shoemaker masters and guilds, expounding his ideas for a flexible custom shoe, and obtaining license contracts for the production of his footbed shoes. Travels all over Germany and Austria for this purpose.

1913

The eldest son of Konrad Birkenstock – Carl Birkenstock – joins the family business.

1915

During the war, Konrad Birkenstock is commissioned by the Frankfurt-Friedrichsheim hospital to manufacture orthopaedic shoes for wounded soldiers. The shoes he made were much appreciated and were promoted by Professor Dr. med. Ludhoff, manager of the hospital.

1925

Konrad Birkenstock junior joins the family business. A larger factory with considerable grounds in Friedberg/Hessen is acquired and expanded. The large number of customers and the huge number of orders make it necessary to work in day and night shifts. The blue footbed is part of the production programme. Shoes are already being exported to Austria, France, Italy and Belgium as well as Denmark, Norway and Sweden. Deliveries are also made to Luxembourg, the Netherlands, Switzerland and Czechoslovakia.

1932

Carl Birkenstock launches what were to become the famous Birkenstock workshops. In the next few years, he trains over 5,000 specialist shoemakers in these one-week workshops on feet and shoemaking. Leading doctors support the courses and the "Carl Birkenstock system".

Workshop in 1937

1935

First edition of Carl Birkenstock's book "Mit dem Arzt gegen Fußkrankheiten und Irrlehren" ("A doctor's guide to the treatment of maladies of the feet and wrong theories"). The book has a total of 83 pages and 87 illustrations, and a run of 15,000 copies on the market.

1947

The specialist book "Fußorthopädie – System Carl Birkenstock" ("Podiatry – the Carl Birkenstock System") is published with a print run of 14,000 copies. With a total of 112 pages and 55 illustrations, Carl Birkenstock expounds his theories of the "natural gait", the so-called footprint system, and healthy shoes. It becomes the bestselling textbook on podiatry of its day.

1954

Karl Birkenstock, son of Carl Birkenstock, joins the family business.

1966

Work on the self-colouring footprint paper is successfully completed, making it much easier for Birkenstock shops to sell their shoes beyond the city limits. The process is patented in Germany, the US and most European countries.

1969

Birko-Cork, a material which becomes malleable when warmed, is developed for orthopaedic use. Birko-Cork is first used on the cork-leather footbed bases for orthopaedic footwear.

1972

The "Buch der Fußgesundheit" ("Book of Healthy Feet") by Karl Birkenstock is published with a print run of 30,000 copies.

1973

Development of an electro-mechanical moulding machine. Using a single adjustable model, the machine is able to produce infinitely variable sizes in just the right proportion. In addition, it allows any number of widths as well as individual areas for the heel and front of the foot to be modelled. This innovation gives Birkenstock the edge in a worldwide market.

1974

A leather-cutting production unit is established in Sankt Katharinen, Rhineland-Palatinate.

1979

A new branch is established in Sankt Katharinen, equipped with large-scale leather cutting machinery with a 100-tonne punch capacity.

Production facilities in Sankt Katharinen/Rhineland-Palatinate

1980

The first specially developed computer-controlled and programmable moulding machine is put into operation. The new system produces four forms simultaneously.

1982

After three years of preparations, five models of thong sandals are brought into the market.

Moulding machine

1983

The „Birkenstock-Fußfibel“ by Karl Birkenstock is published with a print run of 360,000 copies.

1984

Alex Birkenstock, the second son of Karl Birkenstock, enters the family business.

1985

On March 8, the first large junior congress meets at Birkenstock in Bad Honnef.

1986

The second junior congress takes place with over 200 participants.

1987

The Sankt Katharinen branch is equipped with additional large-scale cutting machinery and a sizeable warehouse.

Birkenstock initiates production of outsize shoes (up to size 50) in two widths.

1988

Christian Birkenstock, the youngest son of Karl Birkenstock, joins the family business.

Environmentally-friendly glue is introduced in production. The extra costs (almost twice the price for glue plus the costs of adapting the large machinery to the new glue)

are offset by the improved quality of the adhesive. Birkenstock stakes a claim for the environment, and sets a world-wide example in this direction.

The Federal Chancellor Helmut Kohl visits the company.

1989

The Birkenstock family takes over Alsa* a company producing cork soles and footbeds.

A further production unit for footbeds is set up in Steinau-Uerzell/ Hessen in order to expand production capacities. The company Alsa is still on the market today as an independent company.

An orthopaedic production facility* is set up in Asbach, Rhineland-Palatinate.

Birkenstock organises the third international junior congress.

1990

Stephan Birkenstock, the eldest son of Karl Birkenstock, enters the family business.

Production facility in Asbach

Footwear News labels the Birkenstock sandal „Arizona“ the US „Shoe of the Year“.

Expansion and modernisation of footbed production with a view to environmental protection. Power consumption is reduced by over 90%. Heat recovery units are installed in the ventilation system, and plants for environmentally sound electricity generation are built including waste gas purification systems.

Alex Birkenstock founds Tatami Schuh GmbH*.

1991

To cope with increasing demand, Birkenstock invests in two further production plants in Bernstadt and Seifhennersdorf/Saxony. These plants later develop into S.P.P. GmbH*, an independent, highly specialised supplier of Birkenstock.

The Papillio brand is launched.

1992

Birkenstock produces the first hand-stitched comfort shoes.

A third production plant* in Schönbach/ Saxony is put into operation.

1993

Birkenstock distribution becomes a hi-tech logistics service provider and the L+L Lieferservice und Logistik GmbH* is founded. L+L takes charge of all services in the areas of IT, bookkeeping and distribution.

Production facility in Schönbach

Founding of Birki Schuh GmbH*, Bad Honnef, and the Birki's brand.

1994

Christian Birkenstock founds Betula Schuh GmbH*, Bad Honnef.

Founding of Birko-Orthopädie GmbH*.

1995

Birkenstock comfort shoes give rise to an independent company, the Footprints Schuh GmbH*, which is registered as an independent brand worldwide.

1996

L+L* opens a new, ultra-modern high-bay warehouse in

Asbach, Rhineland-Palatinate for the distribution of Birkenstock products.

1997

Following months of construction, the Lieferservice und Logistik GmbH (L+L) opens a new, ultra-modern logistics centre* in Vettelschoß, Rhineland-Palatinate.

1998

The Birkenstock sales department moves from Bad Honnef to large facilities in Vettelschoß, Rhineland-Palatinate. This allows Birkenstock to provide a year-round exhibition of their range of products in an area of approx. 600m².

In spring of this year, the traditional series of dealership congresses recommences with over 200 dealerships.

Stephan Birkenstock founds Alpro GmbH.

The L+L Lieferservice und Logistik GmbH opens an automatic box storage unit (AKL) in Vettelschoß. It has a storage capacity of over 10,000 boxes and enables the shipping and receipt of 80,000 pairs of shoes a day.

A new tradition begins: Birkenstock stages its first own trade fair in Vettelschoß,

an event which now takes place twice a year.

1999

Birkenstock celebrates the company's 225th anniversary with a large dealership congress.

2001

L+L* begins operation of a new automatic ordering plant (AKA) in Vettelschoß, Rhineland-Palatinate. Computer-controlled processing makes it possible to ship and receive 6,000 pairs of shoes a day as well as allowing delivery within 24 hours.

2002

The internationally popular Birkenstock clog "Boston" celebrates its 25th anniversary.

2003

The "Arizona" model – "Shoe of the Year" in 1990, turns 30.

2004

In England, Birkenstock receives the Drapers Award as "Best Shoe of the Year" in acknowledgement of Birkenstock products' timeless design making them suitable for every age group, any occasion and all types of people.

2005

A new L+L* logistics hall is set up next to the Birkenstock

company headquarters in Vettelschoß, Rhineland-Palatinate.

2006

The Birkenstock brand was awarded the Cleo Fashion Award 2006 in the category "Best Running Shoe" in Singapore.

Diploma of the Drapers Awards

Modell Malibu - the sports and leisure sandal

Light as a feather, flexible and made from a single piece: our model Malibu is the ideal footwear for many everyday activities. Whether you need them after sport, in the sauna, at the pool or for camping - you will find

that Malibu is right for just about every situation. Even if you are on your feet all day at work, Malibu will show you what is in a shoe. The EVA micro-latex foam contains millions of tiny air bubbles, elastically cushioning each step.

Of course the shoes adapt to your feet. Our time-honoured Birkenstock footbed, the flexible material and the individually adjustable straps give you the full Birkenstock level of comfort. A powdercoating layer protects the two buckles against corrosion, making the sandals particularly sturdy. Allround functionality, in every detail.

Comfort for sensitive feet

For particularly sensitive feet we offer some models with the added feature of our "Soft-Footbed", which Birkenstock developed in years of intensive research. A foam cushion is inserted between the flexible cork latex mixture, coated in sturdy natural jute, and the suede leather cover sole. This layer is marked by an exceptionally pronounced recoil function, which ensures long-life padding.

The Birkenstock Soft-Footbed in detail

The hallmark of the Birkenstock soft footbed models is the anatomically pre-formed foam insole (see illustration right). It consists of millions of microscopic air bubbles, facilitating walking and standing. The insole returns to its original, soft, full form.

The Super-Grip

The upper material:

- choice leather, thick, strong and durable

The Footbed:

- anatomically formed
- choice natural jute, cork, leather and natural rubber

The advantages of the super-grip tread:

- non-slip
- non-abrasive
- oil and grease-resistant
- approved according to EN 344

The “intermediate sole”:

- made of strongly shock absorbing EVA
- enables easy rolling motion of your foot and offers superb cushioning

Comfort on the job

Whether you work in a hospital, laboratory or restaurant, we have got a style that works as hard as you do! Birkenstock footwear is designed around orthopaedic principles developed to alleviate the discomfort, stress and fatigue associated with walking and standing on hard surfaces. The result is a shoe that redefines comfort for anyone who spends long periods of time standing or walking. As with all other Birkenstock footwear, our professional line employs materials of highest quality. Again, our Birkenstock footbed consists of choice natural materials like jute, cork, leather and natural latex. The anatomically formed footbed copies a natural footprint in the sand and offers unmatched foot comfort.

Standing and walking jobs

Many times we are required to spend a fair amount of time on our feet. Without supportive footwear, foot and leg fatigue can set in very quickly. Even worse, permanently damaged feet and a variety of other health problems can result. Our recommendation is: wear fashion shoes as little as possible, Birkenstock-sandals as often as possible. There is a good reason why Birkenstock's are favoured by people who have to stand and walk a lot on the job. We do spend a fair amount of our day on the job - a very good reason to spend it on healthy feet! Remember that all our Birkenstock styles are available in two widths. This way you will always have the perfect fit.

For a comfortable day on your feet

The super-grip sole excels through its specific characteristics. Along with the non-abrasive and durable material the super-grip sole convinces with its oil and grease resistant properties. You always have a secure standing position with the help of the extremely slip-resistant super-grip sole. The mark of distinction of the supergrip sole is the combination of the two components which make up the supergrip sole. The rubber tread guarantees secure foothold and is non-abrasive. The EVA-intermediate layer enables the foot's natural rolling motion and cushions each step. You have never passed a more comfortable day on your feet.

The perfect fit through two widths

 for normal, sturdy feet

 for slim, slender feet

Style Antistatic

Have you ever encountered these unpleasant electrostatic shocks when touching a door-knob or a car door or discharges when shaking hands? In order to avoid these painful discharges, our ESD-footwear was developed so that the static charge within our body can continuously dissipate softly. Conductive metal rivets added to the ball and heel of the footbeds drain static electricity from our body through the shoes to the floor. Antistatic glues and an anti-static outer sole (EVA sole) further enhance anti-static protection.

The ESD-tag (Electrostatic Discharge) marks the antistatic sandals

Discharge

Electrostatic discharge can be disastrous when working with semi-conductors, micro-chips and similar hypersensitive electronic equipment.

Our ESD footwear prevents "hard" discharges by allowing static to dissipate softly and continuously. These shoes are perfect for a wide range of manufacturing applications, including clean-rooms. With a resistance of $10^7 - 10^8$ and a fully dissipative outer sole, Birkenstock ESD products are perfect for a wide range of manufacturing and medical applications. A clearly visible symbol readily identifies them as ESD shoes and reminds employees not to wear them off the job site.

The Exquisite styles

With our Exquisite styles the special features of our Birkenstock shoes are made more precious yet. The upper material consists of the finest leather. When selecting it, greatest emphasis is put on durability. The lavish footbed covers of finest Napa leather or high quality microfibre are attached manually and colour coordinated with the upper material. The result of this master craft in shoemaking is the extravagantly exclusive look of choice materials of highest quality. Exquisite - insurmountable comfort, unparalleled.

The new shoes by Birkenstock

Well-laced and so comfortable: our three new closed models have a Birkenstock footbed covered with calf leather that can be removed and exchanged. It is the same as the comfortable footbed that we use for all sandal and clog models. Only the toe-gripper was somewhat toned down, because the cut form of “Devon”, “Norton” and “Harrison”

already provides support. All models are processed with an inner padding of calf leather which is especially moisture-absorbent. In addition, these classic casual shoes have a light and intensely insulating sole made out of polyurethane (PUR).

Footcare

1. Massage-Fluid

Style-No. 0 09 05 5
150ml

Massage gently into skin to soothe sore, tired muscles in arms, shoulders, legs and feet. Instantly alleviate stressed muscles and stiff joints.

2. Foot Buffer

Style-No. 0 70 90 0

Use in the shower or bath to gently smooth callused heels, feet and elbows.

3. Foot & Bathing salt

Style-No. 0 09 05 4
500 g

Natural minerals from the springs of the German spa Bad Kreuznach create a soothing, fragrant bath that softens rough, dry skin. Soak tired, aching feet or indulge in a full bath to relax and rejuvenate your entire body. Ideal for alternating hot/cold soaks.

5. Foot bath tub

Style-No. 0 71 80 0

The foot bath, in particular hot & cold baths with two tubs relaxes your feet and activates the circulation.

6. Noppy-Mat

Style-No. 0 71 90 0

Walk in place for 3-5 minutes daily as numerous "tiny fingers" massage aching feet. The kneading action revitalizes and stimulates circulation bringing quick relief to feet on the go.

Shoe care

1. Nubuk-Care-Set

Style-No. 0 09 09 5

You can remove stains with the special rubber cleaning brush, eliminate shoe dirt with the brush and restore the fine nubuk structure with the crepe chamois.

2. Cork-Care

Style-No. 0 09 09 4

By applying this product, the natural cork is protected and conditioned thus increasing its durability even further.

The Blue Footbed®

The Blue Footbed® is ideal for anyone wanting to enjoy Birkenstock's unique comfort in closed shoes by other manufacturers too. It is available in three widths and two designs. Whereas the Blue Footbed® "Tradition" is more suitable for shoes with heels due to its higher arch, the Blue Footbed® "Sport" is recommended for shoes without heels.

The Blue Footbed®

- takes less room in the shoe than regular insoles
- is manufactured from natural materials and ensures a healthy foot climate
- ensures an optimum spreading of the weight

In case you are wondering: the Blue Footbed® has a three quarter length in order to ensure a perfect fit. Because shoe size can be different from the size of the feet. For this reason, the footbed has to be carefully adjusted by your retailer before purchase.

Without the
Blue Footbed
on hard flat
surface

With the
Blue Footbed
on hard flat
surface

Left: Distribution of pressure by the foot with and without a footbed. With the Blue Footbed® the foot gets a wide stepping surface and the weight is optimally distributed-without a foot bed, the weight is only borne by three points.

Comfort in all shoes

Toe-free insoles from Birkenstock

These insoles are no ordinary flat but anatomically formed masterpieces, which respect and support the natural shape of the foot and immediately provide you with sense of well-being. They fit in any type of shoe!

The heel is sitting in a **cup**. This cup is very thin to reduce heel slippage.

The **toes** can grip without any resistance. The tip of the shoe is spared, toes do not get crowded.

On the **inside** just before the heel, there is another foothold in place.

The **longitudinal curve** is formed anatomically correct all the way to the front of the heel and has a most agreeable effect on the forefoot as well as the longitudinal arch.

The **entire ball of the foot** is cushioned softly.

The **toe-grip** stimulates a natural gripping motion of the toes and thus results in ultimate blood circulation of the foot.

Star-Insole

Ladies:

Size 35 - 42

Style-No. 0 24 00 1

Designed for sling-back pumps and fashion sandals. Self-adhesive, leather-lined in double sizes (35/36 etc.) Insole made of permanently elastic foam provides comfortable, pleasant shock absorption.

Leather-Insole

Ladies:

Size 35 - 48

Style-No. 0 20 00 1

Men:

Size 35 - 48

Style-No. 0 20 10 1

Covered in exquisite leather, this insole made of permanently elastic foam provides comfortable, pleasant shock absorption.

Birko-Tex-Insole

Ladies:

Size 35 - 48

Style-No. 0 26 00 0

Men:

Size 35 - 48

Style-No. 0 26 10 0

Gripping, durable and skin-friendly textile cover. Insole made of permanently elastic foam provides comfortable, pleasant shock absorption.

Leather-lined cork Insole

Ladies:

Size 35 - 40

Style-No. 0 27 00 1

Men:

Size 41 - 46

Style-No. 0 27 10 1

This leather-covered insole is perfect for casual and business shoes and boots. The lightweight cork has well defined contours for gentle support with minimal bulk.

Noppy-Insole

Size 41 - 46

Style-No. 0 25 10 1

Gentle, invigorating massage for your feet, simply place in your shoes to enjoy. Insole is reversible, place in your shoes with the noppy side down for better air circulation.

Terry cloth lined Insole

Ladies:

Size 35 - 48

Style-No. 0 22 00 1

Men:

Size 35 - 48

Style-No. 0 22 10 1

Covered in durable terry cloth. Insole made of permanently elastic foam provides comfortable, pleasant shock absorption.

Full-length insoles with footbed

Footbed insoles are anatomically formed like footprints in the sand. The ball of the foot and the heel are padded softly. Millions of air bubbles within the micro-latex foam let the foot step softly and protect sensitive areas. The micro foam we use is permanently elastic. This guarantees very good shock absorption. Moreover, we offer a variety of different skin-friendly and moisture absorbing cover materials.

Full length BirkoTex® Insole Blue

Style-No. 0 20 70 2
Size 35 - 48

Breathable synthetic lining absorbs moisture.

Full length BirkoTex® Insole Brown

Style-No. 0 20 60 2
Size 35 - 48

Breathable synthetic lining absorbs moisture.

Full length foam insole Leather

Style-No. 0 20 40 2
Size 35 - 48

Full-length foam insole covered in leather.

Full-length insoles for a healthy foot climate

Insoles made by Birkenstock offer foot comfort in any shoe. Different materials like terry, active carbon with a viscose cover and even the exquisite leather insole provide a pleasant foot climate and your well-being.

Drycomfort Insole

Ladies:
Size 36 - 42
Style-No. 0 09 10 9
Men:
Size 40 - 48
Style-No. 0 09 11 0

Liner absorbs moisture from feet to keep them dry. Evaporates moisture faster than cotton or wool.

Go-fresh Insole

Ladies:
Size 35 - 42
Style-No. 0 09 02 6
Men:
Size 40 - 48
Style-No. 0 09 02 7

High-density foam layer provides cushioning. Active carbon neutralizes foot and shoe odour. Hand washable and colorfast.

Terry Insole

Ladies:
Size 36 - 42
Style-No. 0 09 06 6
Men:
Size 40 - 48
Style-No. 0 09 06 7

100% cotton layer absorbs moisture to keep feet dry. Keeps feet comfortable when wearing shoes without socks or stockings. Washable.

Leather Insole

Ladies:
Size 35 - 42
Style-No. 0 09 16 5
Men:
Size 40 - 48
Style-No. 0 09 16 6

Durable, breathable leather top layer. Foam latex provides gentle cushioning.

BIRKENSTOCK®

Made in Germany • Tradition seit 1774

1. Footbed edging: Deliberately elevated to protect the toes.

2. Toe gripper: Steers the toes, promoting the natural rolling movement of the foot.

3. Cross arch support: Helps shift pressure from the middle to the front of the foot.

4. Suede leather cover:
Creates a healthy climate around the foot.

5. Inner and outer longitudinal arch supports: Give the feet balance in walking.

6. Deep heel cup: Gives the foot a firm hold and maintains the heel profile.

7. Cork-Latex-Footbed: Extremely flexible, providing a uniquely high level of wearing comfort.

If you see a style that is not available at your local store, it can be special-ordered by your retailer.

Your local Birkenstock retailer with the friendly service:

Alt i beklædning, fodtøj, rengøringsartikler og sikkerhedsudstyr,
samt reklamegaver og strøartikler med tryk, broderi og gravering, efter opgave.
Skilte, bannere og bilreklamer efter tilbud.
